

Amin Khodabandeh

Senior Software Architect at Capital Platforms Pte. Ltd.

amin.17@gmail.com

Summary

I started programming with QBasic and soon found this ability on myself that I love to create something from nothing, so I started to work with other programming languages such as C and Pascal and later with Delphi and ActionScript.

I have done many projects with Delphi and SQL-Server for many organisations, thus I have earned enough experience in Database projects developing and architecture. Many of these projects still are working as well as in their region and subjects. Working on several subjects leads me to learn networks infrastructures and I get enough experience about Windows Server and Linux.

Soon I have started to develop web applications with ASP.NET with Visual Basic and C#, MVC and Web API, in the parallel side worked with PHP mostly in WordPress and Drupal. JavaScript and HTML5 open new horizons that starts my first steps going familiar with JQuery and later with AngularJS and I really enjoy during playing with them exactly the time I found Nodejs as a way to use Javascript in Back-End development.

Currently I manage a dedicated server with Microsoft Hyper-V with two guest machines on it: one CentOS and one Microsoft Windows Server. Both serves Web-Application in their fields, In CentOS I develop and maintenance more than 10 WordPress web sites.

I've been created two mobile applications by Apache Cordova in both iOS and Android finished by AngularJS that served with WordPress Restful.

My current project is a web and mobile application building up by ASP.NET, Node.js, and Ionic.

Experience

Senior Software Engineer at Capital Platforms Pte Ltd

March 2015 - Present

- As a senior software architect my responsibilities are design, develop and implement applications with most recent technologies and make them to be stable and applicable for our customers.
- As a senior software developer, I create applications by using most recent technologies such as ASP.NET MVC and WebApi, AngularJS, RESTFUL, SQL-Server, HTML5.
